

IT professionals need a better grasp of IT governance principles to combat cyber crime successfully

The governance of IT plays an important role in combating cyber threats, says IT Governance Ltd.

ELY, UK, February 25, 2014 /EINPresswire.com/ -- The governance of IT plays an important role in combating cyber threats, says [IT Governance Ltd](http://www.itgovernance.co.uk), the fast growing cyber security and compliance services provider.

Alan Calder, Founder and Executive Chairman of IT Governance, comments, "Information security is key in any IT governance strategy and is clearly positioned in ISO 38500, COBIT®5, ITIL® and other frameworks.

In the context of a complex IT governance framework environment, it can be hard to adopt an integrated approach to IT risks. Cyber criminals are likely to exploit any gaps and as we know, IT plays a crucial role."

IT managers and information security professionals must have a broad understanding of IT governance and a familiarity with the wide range of frameworks and standards. These best practices can then be deployed in an integrated, business-focused IT governance framework that tackles information security risks, and is fully aligned to business objectives.

Alan Calder is leading the Implementing IT Governance - Foundation & Principles Training Course. The course is designed for individuals whose role requires them to have a broad understanding of IT governance and a familiarity with the wide range of frameworks and standards which can be deployed in an integrated, business-focused IT governance framework. The course will be essential for those who are looking to embed cyber security in an effective IT governance structure.

The course can be booked online here: www.itgovernance.co.uk/shop/p-590.aspx
