

# Glip Gives Evernote Users a Productivity Boost with its Integrated Business Messaging Offering

LOS ANGELES, CA, USA, January 15, 2015 /EINPresswire.com/ --

Glip, Inc., the business messaging company, [announced](#) a new integration with Evernote, the popular tool for organizing digital life. Glip users can now access Evernote's notes directly from the conversation stream, saving time and making it easier to share files, notes, and ideas, with one person, a project team or the whole department. Glip's secure business messaging replaces email for internal communication, and includes intuitive built-in productivity tools that make it easier to focus on the important work, while reducing wasted organizational efforts. With its Evernote integration, Glip makes sharing and searching for content as easy as chat. Notes saved in Evernote can feed into Glip's searchable, real-time conversation streams, significantly reducing the effort involved in finding information at work, whether at your desktop, tablet or mobile device.

The new Evernote integration comes on the heels of last week's [Asana integration announcement](#),

as Glip continues its mission to improve the world's productivity, one team at a time. Glip has released several major industry leading integrations over the course of the past year, including Atlassian's Jira issue tracker, Trello- the task management app, and Box- the enterprise file manager. By integrating with popular workplace applications, Glip is able to drastically improve the process of finding, sharing, and collaborating on content, virtually eliminating the need to use email within a team and across teams.

"We're working faster, more effectively, and across internal teams with a clarity we've never experienced before. Glip gives me the freedom to step away from the office while still being up to date on company projects and available for critical questions and communication."

- Justin Biel, Co-Founder of [BARE](#)

Integrating Evernote with Glip delivers:

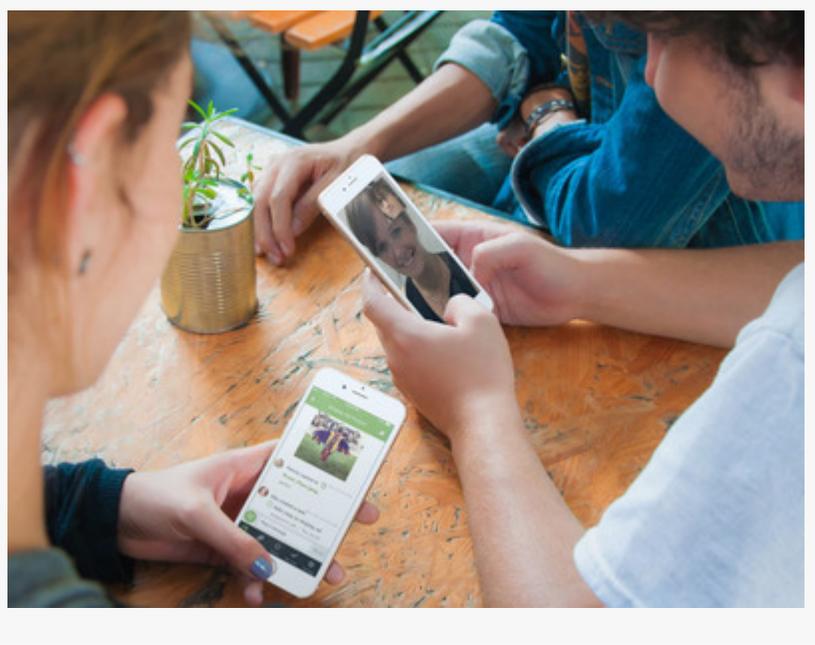

Flexible, multi-source file sharing: In addition to quickly sharing notes saved to Evernote, teams can

choose to drag and drop files into conversations from their mobile device, computer or from Dropbox, Box and Google Drive.

**Faster search:** Users can immediately locate notes from Evernote with Glip's advanced search in addition to Glip's built-in tasks, events, links and a growing list of integrations.

**Reduced overhead:** Glip makes it possible for users to quickly navigate conversations and shared content from any location, removing the need to search through email inboxes or switching between applications. Glip is self-organizing, leading to improved team engagement and energy while allowing users to focus on what matters.

“Evernote is the ideal place to store and organize your notes, web clippings and even audio recordings of your meetings, while Glip is the perfect way to share all that and more with your team and co-workers,” said Peter Pezaris, Co-founder and CEO of Glip, Inc. “We are delighted to bring this integration to market, allowing the large Evernote user base to take advantage of Glip’s intuitive and powerful messaging, along with our shared tasks and calendars that strongly complement the Evernote feature set.”

“

Evernote is the ideal place to store & organize your notes, web clippings & even audio recordings of your meetings, while Glip is the perfect way to share all that & more with your team & co-workers.

*Peter Pezaris, Co-founder & CEO of Glip, Inc*

Glip users can quickly integrate and share from their Evernote account by signing into their free or paid Glip account, selecting “+” when composing a message to “Share Files” and choosing “From Evernote”. The user will be prompted to authenticate their Evernote account and from then on will be able to quickly access, share, and search notes from their Evernote account in any Glip conversation.
