# onTune Highlights the onTune nmon Analyzer - a tool for AIX and Linux nmon users

Turbocharge your nmon analysis - onTune nmon Analyzer amplifies the power and utility of nmon-captured performance data.

PINE BROOK, NEW JERSEY, USA, March 5, 2015 /EINPresswire.com/ -- onTune LLC introduces the onTune nmon Analyzer - a tool for AIX and Linux nmon users that amplifies the power and utility of nmon-captured performance data.

Developed by and for System Engineers and Administrators, the onTune nmon Analyzer greatly increase the productivity and efficiency for AIX and Linux nmon analysis with the following capabilities:

See all nmon items in one view

- process nmon log files, specially very large files , 20 to 100 times faster
- displays results for easy review, and comparison of many results at one time
- display all disks at one time, or a subset based on definable parameters
- merge and analyze multiple sequential log files
- analyze same time period log files of multiple servers, and display basic results in one view
- visually analyze TOP processes for a specific period
- enable nmon intervals to unit of seconds.

onTune nmon Analyzer runs on Windows 2003 , XP or later; for a price of $299.00.
