

# Vigilant Software publishes new video tutorials on conducting an information security risk assessment

---

ELY , UK, March 31, 2015 /EINPresswire.com/ -- [Vigilant Software](#), the leader in compliance software, has published new video tutorials that show [vsRisk](#)<sup>™</sup> users how to conduct effective information security risk assessments and treat risks. The video series consists of three short videos, each demonstrating a different element of the risk assessment.

The video tutorials can be viewed here: [www.vigilantsoftware.co.uk/t-support.aspx](http://www.vigilantsoftware.co.uk/t-support.aspx).

vsRisk significantly reduces the time spent performing an ISO 27001-compliant information security risk assessment. The integrated, searchable databases of threats, vulnerabilities and risk scenarios make the risk assessment process simple and intuitive. vsRisk features a controls console that offers a quick view of the status of controls and actions planned, while producing a set of exportable, reusable and audit-ready ISO 27001-compliant reports.

The latest version, vsRisk 2.5, makes the risk assessment and ISO 27001 compliance process even more straightforward by providing an example risk assessment, and by identifying the necessary documents and offering the option to include built-in document templates.

The new set of tutorials provides an overview of the benefits of vsRisk and explains how to install, configure and use the software.

Watch the videos now: [www.vigilantsoftware.co.uk/t-support.aspx](http://www.vigilantsoftware.co.uk/t-support.aspx).

To view the full features of vsRisk, visit the developer's website at [www.vigilantsoftware.co.uk](http://www.vigilantsoftware.co.uk).
