

Vaginal Laxity And Urinary Incontinence Treatment Options Increase With The FemiLift In Chicago

The Liposuction and Cosmetic Surgery Institute is one of the first to offer this brand-new treatment for vaginal rejuvenation in Chicago.

CHICAGO, IL, USA, March 31, 2015 /EINPresswire.com/ -- Women who have suffered from vaginal laxity, dryness, or urinary incontinence now have even more options for treatment. The FemiLift is a brand-new procedure being offered by Chicago plastic surgeon, [Dr. Leon Tcheupdjian M.D.](#) (Dr. T) and his team at the [Liposuction and Cosmetic Surgery Institute](#).

The procedure is the first of its kind, using a laser to rejuvenate and tighten the vaginal walls. Painless, less expensive, and quicker than other vaginal rejuvenation procedures, the FemiLift is a non-surgical procedure that requires virtually no recovery time. A FemiLift in Chicago can help alleviate the problems associated with vaginal laxity, vaginal looseness, and urinary incontinence as it can be used for vaginal rejuvenation and tightening, leading to healthier sexual performance and enhanced vaginal pleasure.

"Vaginal laxity is an extremely common, but highly unreported, problem for women. For some it's a matter of not wanting to talk about the issue. Others think there's nothing that can be done for them or they don't want to go through an invasive surgery process. FemiLift changes that. It's quick, painless, and can be done on a lunch break. Patients can walk out and go on with their normal routine," explained Dr. Leon Tcheupdjian M.D., Founder/Medical Director Liposuction and Cosmetic Surgery Institute, Chicago (<http://www.lipodoc.com>).

During the 15-20 minute procedure, a sterile pixel CO2 laser delivers energy to the vaginal wall. The laser energy stimulates tissue remodeling and collagen contraction in the vaginal wall, which tightens vaginal muscles. Tighter muscles and enhanced vaginal tone help prevent urinary incontinence, increase sexual stimulation for both partners, promote vaginal lubrication, and improve blood circulation.

"Typically, patients will receive three treatments, one every four weeks. The results can be sensed immediately, though the repair process does take time and continues to progress even

months after treatment. Although the results last for years, we recommend an annual maintenance treatment. This keeps collagen production stimulated and allows us to gauge the progress," explained Dr. Tcheupdjian.

FemiLift vaginal rejuvenation in Chicago can benefit any woman who:

- experiences urinary incontinence
- experiences vaginal looseness
- experiences vaginal laxity after childbirth
- experiences vaginal dryness
- wants to enhance sexual sensation, for both herself and her partner

The Liposuction and Cosmetic Surgery Institute is one of the only clinics to offer this procedure for vaginal tightening in Chicago. The Institute has four locations spread throughout Chicagoland: Chicago's Gold Coast, Arlington Heights, Naperville, and Oak Brook, for the convenience of their patients.

Visit the Liposuction and Cosmetic Surgery Institute online at www.lipodoc.com to learn more about the FemiLift and other procedures that are available.
