Market Scenario:

A polyp biopsy is a test that takes a sample of, or removes polyps (abnormal growths) for examination. Polyps are growths of tissue that may be attached by a pedicle. Polyps are commonly found in organs with many blood vessels. Such organs include the uterus, colon, and nose. Most polyps are benign but some polyps are malignant. The most common site of polyps is the colon. Usually polyps don't cause any symptoms hence they go undetected most of the times. If polyp is detected in the body, it is likely that the biopsy is performed. During which, a sample of tissue is removed and analyzed under a microscope. Polyps can develop in people of all ages but are most commonly discovered in adults over age 50. They are found especially in those who smoke, consume alcohol and are overweight. The market for polyp biopsy is booming. The global market for polyp biopsy is expected to reach US\$ XX by the end of the forecasted period and is expected to grow at a CAGR of XX%.
