PUNE, INDIA, November 24, 2016
/EINPresswire.com/ --

The analysts forecast the [global LI-FI market](#) to grow at a CAGR of 47.73% during the period 2016-2020.

The incapability of light to penetrate obstructions and walls ensures that data transmitted will be limited to the room or space. This property makes Li-Fi more secure than Wi-Fi. In addition, Li-Fi does not cause electromagnetic interference. Although the LED bulb must be kept on for transmitting the signal, it can be lowered as per needs. Data can be transferred using Li-Fi technology through all types of light, regardless of their spectrum. Moreover, Li-Fi ensures that a user does not necessarily have to be in a Wi-Fi enabled region, and can surf the internet by being around a source of light.
