Phosphorus is being recovered from sewage, manure and other sources and made available as a fertilizer. Since phosphorus is a finite source, companies are looking for ways to recycle or recapture phosphorus to use in agriculture. Plants' available phosphorus content is increased through anaerobic digestion and composting and in sludge from sewage through acid treatment and oxidizing. Manure and sludge when treated appropriately can provide more phosphorus than traditional inorganic fertilizers.

The [fertilizer industry comprises](#) establishments primarily engaged in nitrogenous fertilizer manufacturing, phosphatic fertilizer manufacturing and fertilizer manufacturing.

According to The Business Research Company's Chemical Consultant, Yogesh Bathula, the [global fertilizer market](#) is expected to grow in the future due to the technological development. Areas of particular development are likely to be fertigation and foliar applications that require micro irrigation systems for dispensing water-soluble formulations of nutrients.

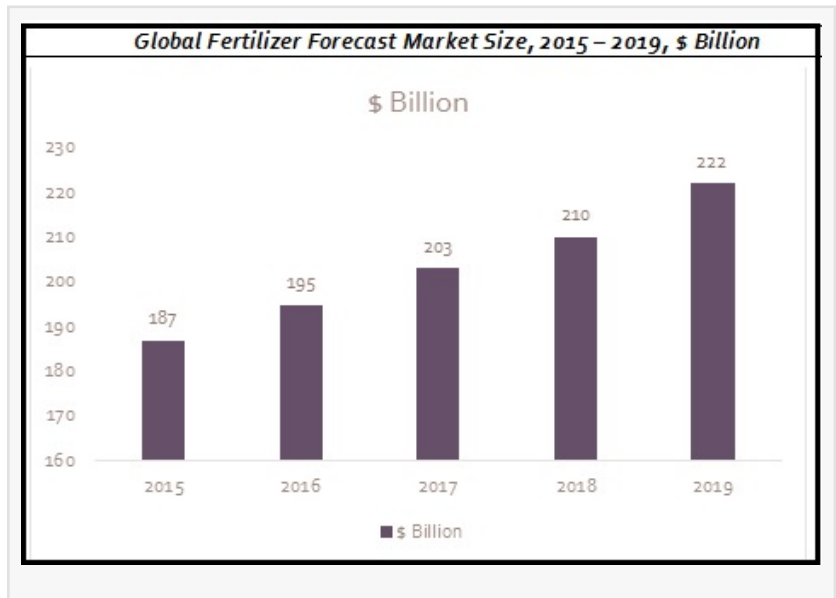

The Business Research Company expects the fertilizer market to grow to \$222 billion in 2019. Asia was the largest geographic market in the fertilizer market in 2015, accounting for \$104 billion or 55.5% of the global market.

The fertilizer market is fragmented. Agrium is the leading competitor, followed by PotashCorp and Eurochem.

The figure show the forecast year-on-year growth of the global fertilizer market during 2015 – 2019.
