The analysts forecast the global mini data center market to grow at a CAGR of 17.17% during the period 2017-2021.

A mini data center is defined as a self-contained system designed to be from a single rack (micro data center) to up to 40 rack enclosure (containerized and aisle containment solution). The system houses IT infrastructure with integrated support infrastructure, such as power and cooling systems. These data centers can

support IT load of up to 250 kW and are suitable as disaster recovery data centers, branch office operations, and for edge computing purposes.

Covered in this report

The report covers the present scenario and the growth prospects of the global mini data center market for 2017-2021. To calculate the market size, the report considers the revenue generated from following:

- Micro data center: From stand-alone single rack data centers up to aisle containment deployment with integrated power, cooling, and monitoring solutions; for example, Emerson SmartAisle solutions.
- Containerized data center: It includes market size of integrated infrastructure modules, namely IT, power, and cooling in one modular system; for example, Huawei all-in-one container facilities.

The market is divided into the following segments based on geography:

- Americas
- APAC
- EMEA
