

Lyophilization First! FUJIFILM Diosynth Present New Formulation Strategies During Clinical Development

NEW JERSEY, ISELIN, UNITED STATES, July 17, 2017

[/EINPresswire.com/](http://EINPresswire.com/) -- SMi Group's next annual [Lyophilization](#) USA show is thrilled to welcome Dr. Gayathri Vasudevan, Principal Scientist Group Leader at FUJIFILM Diosynth Biotechnologies onto the [speaker](#) panel for 2017.

Dr. Vasudevan expertise lies in the analytical characterization of the complex behavior of proteins and novel therapeutics, integrating a wide spectrum of techniques and strategies to aid process development, biophysical characterization and formulations development.

A key topic focus in Gayathri's presentation is the transition process from frozen or liquid, to lyophilized formulations. Utilizing lyophilization for early clinical trials would be a significant advantage to the lyophilized state, specifically in early development, enabling more time and resources dedicated towards optimizing the desired formulation (liquid v lyophilized).

Additionally, the Principal Scientist will explore a variety of formulation strategies from the design of uncertain dosage/delivery formats, to the biophysical tools required to understand a protein biopharmaceutical.

For those looking to attend there is currently a \$100 [early-bird](#) saving.
