[Silver Nanoparticles Market 2017](#)

Executive Summary

Silver nanoparticles (AgNPs) or nanosilver refer to the particles of silver ranging between 1nm-100nm in size. They can be of a variety of shapes such as octagonal, diamond, spherical, and thin sheets, depending upon the application. However, spherical silver nanoparticles are most commonly used. The advent of nanotechnology has also given rise to nanoparticles that have thermal and chemical stability. The global silver nanoparticles market is driven by factors such as increasing production of applications necessitating miniature electronic systems, antimicrobial properties of nanosilver, and increasing focus on food packaging. However, the global market has its share of challenges such as high costs in comparison with steel, fluctuating silver prices, issues related to toxicity, and regulatory guidelines restricting the market growth.

The analysts forecast the global silver nanoparticles market to grow at a CAGR of 15.79% during the period 2017-2021.
