## About Industrial Food Dryer

Drying is a process that removes liquid from solid materials using methods other than mechanical methods. Drying is the final step before the packaging of products. The drying process involves a source of heat and air flow, which are used to evaporate the water content from the materials. In industrial dryers, drying of materials takes place through conduction, convection, or radiation. Industrial dryers are used to dry bulk materials like food, grains, medicines, and others.

Technavio's analysts forecast the global industrial food dryer market to grow at a CAGR of 2.43% during the period 2017-2021.
