[pH Meter Market Analysis And Forecast](#)

About pH Meter

A pH meter is a scientific device used to calculate the hydrogen-ion activity in water-based solutions. It is used to detect the alkalinity or acidity of a solution, on a numeric scale where 7 is neutral. Solutions with a pH greater than 7 are basic and that with a pH less than 7 are acidic in nature. pH meters are extensively used in food and beverage processing and water and waste treatment industries. Any developments in these industries will directly impact the water treatment equipment market and subsequently the pH meter market.

Technavio's analysts forecast the global pH market to grow at a CAGR of 4.98% during the period 2017-2021.
