[Die Casting Market 2017](#)

Casting is a process, in which the liquid metal is poured into a mold that contains a hollow cavity of the desired shape. It is then allowed to solidify and is removed from the mold. Casting materials are usually metals or cold setting materials like epoxy, plaster, or clay that cure when mixed with other components. Casting helps in making complex shapes that are otherwise difficult to make by using other processes. Die casting is a process that can manufacture geometrically complex shaped metal parts using reusable molds (known as dies).

The analysts forecast the global die casting market to grow at a CAGR of 4.99% during the period 2017-2021.
