

# Mammography Screening population in United States will increase to more than 50 Million by 2022

*Breast Cancer Screening Market in United States worth US\$ 5.8 Billion by 2022*

PUNE, MAHARASHTRA, INDIA, October 24, 2017 /EINPresswire.com/ -- Breast cancer is the most commonly diagnosed cancer among American women. In 2017, it's estimated that about 30% of newly diagnosed cancers in women will be breast cancers. Breast cancer death rates are higher for women in the US than those for any other cancer, besides lung cancer.

Increasing incidence of breast cancer cases in United States is the major factor for growth in [breast cancer screening](#) market in United States

Other factors include:

- Increasing awareness related to early breast cancer detection (First [Breast Cancer Awareness Month](#) was observed in the United States in the month of October)
- Growing government investments and funding for breast cancer screening (Breast Cancer Awareness Month is as much about raising funds for breast cancer research and support, as it is about raising awareness)
- Technological advancement in breast imaging technologies and implementation of several initiatives to create awareness about the early detection of breast cancer.
