

Ulcerative Colitis Therapeutic and Disease Pipeline Review 2017

Ulcerative Colitis Therapeutic Pipeline Market Review 2017

PUNE, INDIA, October 30, 2017 /EINPresswire.com/ -- Pune, India, 30th October 2017: WiseGuyReports announced addition of new report, titled "EpiCast Report: <u>Ulcerative Colitis</u> - Epidemiology Forecast to 2025".

Summary

Ulcerative colitis (UC) is an inflammatory bowel disease (IBD) characterized by long-lasting inflammation and ulcers (sores) in the lining of the digestive tract. In UC, because of an abnormal response of the body's immune system, the lining of the colon becomes inflamed and develops tiny open sores, or ulcers, that produce pus and mucous. This causes abdominal discomfort and frequent emptying of the colon. There is no cure for UC except surgical removal of the colon, but medications can help curb the inflammatory response and symptoms. UC commonly affects teenagers and young adults, and can result in poor development and growth; nonetheless, the disease can also occur in children and older individuals.

GET SAMPLE REPORT @ https://www.wiseguyreports.com/sample-request/939772-epicast-report-ulcerative-colitis-epidemiology-forecast-to-2025

In the 7MM, epidemiologists forecast that the diagnosed incident cases of UC will increase from 86,509 cases in 2015 to 95,864 cases in 2025, at an annual growth rate (AGR) of 1.08%. The US will have the highest number of diagnosed incident cases of UC over the forecast period, while Spain will have the lowest.

In the 7MM, epidemiologists forecast that the diagnosed prevalent cases of UC will increase from 1,628,113 cases in 2015 to 1,711,603 cases in 2025, at an AGR of 0.51%. The US will have the highest number of diagnosed prevalent cases of UC over the forecast period, while Spain will have the lowest.

To forecast the diagnosed incident and diagnosed prevalent cases of UC in the 7MM, epidemiologists used country-specific studies and peer-reviewed journals that provided age- and sex-specific diagnosed incidence and/or diagnosed prevalence of UC in the respective markets. The forecast methodology was consistent across the 7MM to allow for a meaningful comparison of the forecast incident and prevalent cases of UC across these markets.

Scope

- The Ulcerative Colitis (UC) EpiCast Report provides an overview of the risk factors and global trends of UC in the seven major markets (7MM) (US, France, Germany, Italy, Spain, UK, and Japan). It includes a 10-year epidemiological forecast for the diagnosed incident cases, diagnosed prevalent cases, undiagnosed prevalent cases, and total prevalent cases of UC segmented by sex and age in these seven markets. The diagnosed incident cases are further segmented by stage at diagnosis and severity grading. The diagnosed prevalent cases are further segmented by severity grading. Additionally, autoimmune comorbidities, colectomy due to failure of medical management, and

mortality due to complications of UC among the diagnosed prevalent cases of UC are also included in this analysis. Furthermore, the report includes diagnosed incident cases and diagnosed prevalent cases of indeterminate colitis (IC) for both sexes and all ages in the 7MM.

- The UC epidemiology report is written and developed by Masters- and PhD-level epidemiologists.
- The EpiCast Report is in-depth, high quality, transparent and market-driven, providing expert analysis of disease trends in the 7MM.

Reasons to buy

The UC EpiCast report will allow you to -

- Develop business strategies by understanding the trends shaping and driving the global UC market.
- Quantify patient populations in the global UC market to improve product design, pricing, and launch plans.
- Organize sales and marketing efforts by identifying the age groups and sex that present the best opportunities for UC therapeutics in each of the markets covered.
- Identify the percentage of diagnosed incident cases of UC by stage at diagnosis and severity grading.

Table of Content: Key Points

- 1 Table of Contents 6
- 1.1 List of Tables 7
- 1.2 List of Figures 9
- 2 Epidemiology 11
- 2.1 Disease Background 11
- 2.2 Risk Factors and Comorbidities 12
- 2.3 Global Trends 13
- 2.3.1 Incidence 14
- 2.3.2 Prevalence 17
- 2.4 Forecast Methodology 20
- 2.4.1 Sources Used 20
- 2.4.2 Forecast Assumptions and Methods 31
- 2.4.3 Sources Not Used 49
- 2.5 Epidemiological Forecast for UC (2015-2025) 50
- 2.5.1 Diagnosed Incident Cases of UC 50
- 2.5.2 Diagnosed Prevalent Cases of UC 58
- 2.5.3 Undiagnosed Prevalent Cases of UC 69
- 2.5.4 Total Prevalent Cases of UC 76
- 2.5.5 Diagnosed Incident Cases of IC 83
- 2.5.6 Diagnosed Prevalent Cases of IC 85
- 2.6 Discussion 86
- 2.6.1 Epidemiological Forecast Insight 86
- 2.6.2 Limitations of the Analysis 87
- 2.6.3 Strengths of the Analysis 88
- 3 Appendix 90
- 3.1 Bibliography 90
- 3.2 Physicians and Specialists Included in this Study 95
- 3.3 About the Authors 97
- 3.3.1 Epidemiologists 97
- ...Continued
