About Pulse Oximetry

Pulse oximetry is a noninvasive test used to measure the oxygen saturation level in the blood. The principle of pulse oximetry is based on spectrophotometry. The testing method is easy and painless. A pulse oximeter monitors the amount of oxygen being sent to the different parts of the body. It has a clip-like device, which is attached to a thin body part such as fingertips or earlobes. Pulse oximeters are also used to check the health of individuals with medical conditions that affect blood oxygen levels such as heart attack, heart failure, chronic obstructive pulmonary disease (COPD), anemia, lung cancer, asthma, and pneumonia.

Technavio's analysts forecast the pulse oximetry market in Japan to grow at a CAGR of 5.20% during the period 2017-2021.
