

Onchain, Pioneer Blockchain R&D Company, Redefines Distributed Trust Network

Event attendees will have the opportunity to learn more about Onchain's public platform.

SHANGHAI , CHINA , November 16, 2017 /EINPresswire.com/ -- [Onchain](#), a Shanghai-based blockchain R&D company, is hosting an event this Saturday, November 18th in Shanghai to showcase their new distributed trust network, before its [official launch in NYC, November 27th](#). The first Chinese blockchain company to join [Hyperledger](#), is now bringing a groundbreaking public platform that allows every business, no matter their level of technical background, to integrate the blockchain technology into their systems, allowing them to provide safer and fairer services.

"The project is the first public platform to allow all business types, including those with little or no technical background, to easily plug into decentralized systems. Ontology Network uses distributed identity verification, data exchange, communities, and other industry-specific features along with a robust smart contract protocol to build an unparalleled trust ecosystem. Ontology will continue to provide support for additional protocols and modules, welcoming further distributed business scenarios." - Jun Li, Chief Architect of Onchain

“

Ontology Network turns ordinary data into tradable data assets. The public platform allows individuals and businesses to securely access untapped personal and commercial data for exchange.”

*Hongfei Da, CEO of Onchain
& Blockchain Community
Leader*

Event attendees will have the opportunity to learn more about Onchain's public platform. Keynote speakers include Can Wang, Senior Vice President and Executive Director of Fosun, Zhou Dong Li, Deputy Secretary-General of MIIT (Ministry of Industry & Information Technology) Blockchain Forum & Head of MIIT Open-Source Workgroup, Jun Li, Chief Architect of

Onchain & Author of MIIT Blockchain Standards and more.

About Onchain

Onchain is a high profile Chinese blockchain startup that has received international media attention. With the use of smart contracts, Onchain created a distributed trust network by building the infrastructure for more secure and fair identity verification, data storage, and exchange. Their project is designed to help different businesses adopt and integrate the blockchain in their services.
