

ShotStop's Duritium™ Technology Takes Poly Armor Plates to a Whole New Level

ShotStop Ballistics has developed a patented technology that establishes a new standard for comfortable, lightweight, multi-hit NIJ III+ ballistic protection

STOW, OHIO, USA, November 20, 2017 /EINPresswire.com/ -- When it comes to poly [body armor plates](#), the primary advantage is packing a powerful defense with minimal weight and bulk. ShotStop Ballistics has developed a patented technology that has established a new standard for comfortable, lightweight, multi-hit [NIJ III+ protection](#).

The secret? ShotStop's patented Duritium™ technology results in approximately 30 percent reduction in thickness and weight when compared to the next best poly plate on the market at the same NIJ III+ protection level. In many cases, the Duritium-based plate is up to half as thick as other comparable stand-alone poly plates. This means your officers in the field have the same level of protection with much less bulk.

The strength of Shotstop's Duritium™ technology also allows the company to offer a 10-year warranty on its armor plates, whereas the industry standard is typically five years. When compared to the inexpensive and heavy ceramic plates on the market, this warranty is essential, as there is no potential of cracking during ownership.

All of this leads to increased comfort, more piece of mind, and higher maneuverability...resulting in the likelihood of higher survivability in active threat situations.

For those looking at [lightweight poly rifle plates](#) for their next purchase of armor protection, considering ShotStop's new ultra-light, ultra-thin, high protection plates is a smart move.

To learn more about body armor plates, Duritium™ Technology, or ShotStop Ballistics' full range of products, visit www.ShotStop.com or call 800-986-0795.

About ShotStop Ballistics, LLC

With its patented technologies, ShotStop Ballistics provides advanced armor solutions that are

stronger, lower weight, and lower cost. Since 1984, the company's engineering wing has provided solutions to Fortune 500 companies and small businesses facing product development challenges in their quest to expand their product offerings. The company operates under rigorous manufacturing processes with redundant quality control systems. Random samples of each production lot are submitted for testing to independent and federally accredited ballistic labs including the Department of Defense and National Institute of Justice. Contact ShotStop Ballistics at www.ShotStop.com or call 800-986-0795.
