TraceGains Announces Expansion of Supplier Management Product Suite

TraceGains releases new Supplier Management Standard solution to address industry demands for operational transparency and efficiency across the supply chain.

DENVER, COLORADO, UNITED STATES, December 1, 2017 /EINPresswire.com/ -- TraceGains, the leading compliance software solution, revolutionizing information exchange across the supply chain for Food, Beverage, and CPG companies, has expanded its product suite to include Supplier Management (SM) Standard, which opens the door for many small and mid-size companies to automate and digitize their documents and processes via TraceGains' proven solution.

With its roots in TraceGains' most beloved product, Supplier Management, the new Supplier Management Standard offers core functionality to qualify suppliers and items through TraceGains Network, automate approval and management of supplier certifications, documents, and statuses for expiration and other issues, and at-a-glance dashboards and charts for visual data representation.

Powered by TraceGains Network, which boasts more than 5,000 suppliers in 48 countries and a library of more than 100,000 discoverable supplier documents, Supplier Management Standard users will be able to improve operational efficiency by eliminating duplicate tasks for document requests. Leveraging the TraceGains PostOnce™ feature, suppliers will load their standard documents once and distribute to all their TraceGains connections.

Regardless of company size, Supplier Management addresses a core need within the industry – taking previously stagnant data and transforming it into actionable information that can improve business function and mitigate risk.

Supplier Management Standard users also have the option to take advantage of the DataLink integration between TraceGains and ESHA Research's Genesis product. This integration provides a critical connection to improve product development and minimize errors in nutritional labeling by automatically sending data from TraceGains to Genesis.

"TraceGains is revolutionizing information exchange across the supply chain, and that means offering proven solutions for companies of all sizes throughout the supply chain," commented Gary Nowacki, CEO, TraceGains. "With Supplier Management Standard, many small to medium business now have access to a powerful supplier management solution that is sized just right for their business."
