

Global Sugar Free Chocolate Market 2017: Key Players: Godiva Chocolatier, Inc. (U.S.), Lindt & Sprungli SAS (France)

PUNE, MAHARASHTRA, INDIA,
January 17, 2018 /EINPresswire.com/ --

WiseGuyReports published new report,
titled "Global Sugar Free Chocolate
Research Report"

SUMMARY

The legal definition is that there has to be less than 0.5 g of sugars per reference serving size. For 100% sugar-free the reference serving size is 40 g, so the 0.5 g/40 g equates to less than 1.25 % sugars allowed. Sugars are considered to be mono and disaccharides and this will include glucose, sucrose, fructose and lactose. No-sugar added chocolate generally have no added sucrose, but may contain another sugar such as lactose, which is found in milk powder.

The trend towards healthier food continues to gain ground and is significantly changing consumer lifestyles and purchasing habits. In response to a multitude of nutritional recommendations and consumers want products that allow them to indulge themselves without the need for sugar. The indispensable key to the success of a sugar-free product is that it is healthy version of unhealthy calories. Today's consumer is eager to try low-sugar or sugar-free products, but not at the expense of enjoyment, not least when it comes to chocolate. Maltitol probably the best substitute for sugar, not only provides sweetening power, but also the calories are cut down to half. This will delight confectionery gourmets with waistline worries and chocolate addicts trying to reduce their sugar intake. The sweet taste of maltitol, combined with physico-chemical characteristics similar to those of sucrose, make it the most effective substitute for sugar in many applications and especially in the manufacture of chocolate. Crystallized maltitol is non-acidogenic and non-cariogenic and hence it harmless to teeth as it is non-fermentable by the buccal flora. Traditional chocolates contains around 30-50% of sugars, most of which is sucrose which gives chocolate a sweet taste while allowing the aromatic notes of the cacao beans to fully express themselves and provides the volume essential for making quality chocolate. But, Maltitol without any sugars, performs the same functions and the addition of intense sweeteners is not required. Thus making chocolate healthy and guilt-free. Sugar free chocolates are not only healthy for diabetics' patients but also helps consumers achieve their weight loss target without giving up the food they love. Hence, these factors will support the growth of this market during the forecast period.

Global Sugar free chocolate by category is segmented into two type 100% sugar free and no added sugar. The 100% Sugar Free segment is projected to reach USD 3.05 Bn by the end of 2023 and will
