

# Bitcoiin B2G Announces New Scalability Technology in ICO

*Through a combination of sharding, and level-2 processing, our implementation of the Ethereum algorithm allows smooth ledger posting and flexibility.*

HONG KONG, CHINA, February 12, 2018 /EINPresswire.com/ -- [Bitcoiin B2G](https://www.bitcoiin.com), [www.bitcoiin.com](https://www.bitcoiin.com), announces a new approach to scalability, as part of its Initial Coin Offering (ICO), now open for pre-launch discount cryptocurrency investing. An important part of a second-generation token ecosystem, our fresh solution to the problem of scaling blockchain ledger computations offers safe, fast blockchain posting. From Day One, B2G provides security, speed and reliability.

The scalability problem refers to the limits on the amount of transactions any blockchain, including the Ethereum blockchain. Since blockchain records (“blocks”) are limited in size and frequency, mature ecosystems like the original bitcoin have resorted to hard and soft forking. This has proven, so far, to be the only way to avoid unacceptable latency delays in posting blocks to the blockchain. For original bitcoin, blockchains post every ten minutes, on average. But there is a bottleneck as blocks are formed. Sometimes the pipeline takes as much as 48 hours to catch up. During that time, accounts remain frozen.

The architects of B2G thought this was unacceptable delay. Thus, we adopted the Ethereum blockchain algorithm. Faster than the original bitcoin. Flexible enough to allow smooth block throughput. And, with a fresh coin offering, our experience has been that blockchain postings occur in real-time. Through a combination of sharding, and level-2 processing, our implementation of the Ethereum algorithm allows smooth ledger posting, and provides flexibility which will be needed as the blockchain grows. That means no delays in posting transactions to the distributed blockchain.

Flexibility. Accuracy. Scalable throughput. Security. All of these can be counted on, as B2G matures into a global investment platform.

A Comprehensive Solution: B2G was designed as a comprehensive solution, offering a buy/sell/trade platform, mining pools and wallet stakeholding. Our strategic alliance with Dragon Mining, which gives us access to thousands of mining rigs configured in parallel, provides a strong backbone. B2G is designed for global growth. We expect success. We know the impending launch of our ICO is based on a strong foundation, because that foundation was designed in from the beginning.

Flexibility. Accuracy. Scalable throughput. Security. All of these can be counted on, as B2G matures into a global investment platform.

Cryptocurrency enthusiasts, depositors and adventurers have seldom had such a chance to participate in the exhilarating launch of an integrated cryptocurrency ecosystem, with built-in controls, strong management and explosive upside growth potential.

We announce the [second generation of cryptocurrency](#). Seldom does life grant a second chance. Initial purchases are available at the pre-launch discount price of \$5.00 USD per token.
