

Enginuity Power Systems Invited to Speak to American Gas Association

*Chief Technology Officer James Warren
To Address BECS Committee in
Albuquerque*

ALEXANDRIA, VA, UNITED STATES,
April 20, 2018 /EINPresswire.com/ --
[Enginuity Power Systems'](#) Chief
Technology Officer James Warren has
been invited to speak at the [American
Gas Association's](#) Standards Conference
in Albuquerque, New Mexico on May 8,
2018. The primary topic is about the
capabilities of Enginuity's designed,
manufactured, and patented [Combined
Heat and Power](#) (CHP) Unit.

This powerful in-home system runs
quieter and without the intrusive vibration which is common to home generators, allowing you to be
your own utility, and making your home a key component in an increasingly decentralized power
distribution grid. Enginuity's CHP can be an integral part of the power delivery system underpinning
America's clean-energy future.

“

I really believe the natural gas
and electric utilities will be
rocked by the environmental
sea-change that the Enginuity
Combined Heat and Power
unit represents.”

Jim Warren

"To have been invited to speak to the American Gas
Association is very exciting. This presentation marks the first
time that our revolutionary Combined Heat and Power Unit will
be presented; and it's particularly meaningful since this is
such a knowledgeable group." says Jim Warren. Mr. Warren
goes on to say, "I really believe the natural gas and electric
utilities will be rocked by the environmental sea-change that
the Enginuity Combined Heat and Power unit represents."

Enginuity's CHP can power residential and commercial buildings as their primary source of electricity,
can serve as an emergency backup source and supports the developing microgrid and nanogrid
movement. The best part of this exciting new technology is its retrofit capability into the same space
currently occupied by conventional water heaters; integration is as easy as 'plug and play'.

About the American Gas Association (from [aga.org](#)):

The American Gas Association, founded in 1918, represents more than 200 local energy companies
that deliver clean natural gas throughout the United States. There are more than 73 million
residential, commercial, and industrial natural gas customers in the U.S., of which 95 percent — more
than 69 million customers — receive their gas from AGA members. Today, natural gas meets more
than one-fourth of the United States' energy needs.

About Enginuity Power Systems:
Enginuity Power Systems is a team of professionals who have been focused on developing a revolutionary technology that has the ability to change the paradigm of power usage in the United States; and around the world. Since 2004, we have been extremely proud to be a 100% United States-based company with every aspect of our operation being domestic for design, research, development, sourcing, manufacturing, testing and investment. Learn more about the vertical applications by visiting the website: www.enginuitypowersystems.com.
