

ITSENCLOSURES Introduces New Printer Box Enclosure for Zebra Printers

ITSENCLOSURES introduces new printer enclosure for zebra printers. Designed to shield and protect label barcode printers, on harsh and dirty factory floors.

MT PLEASANT, PA, UNITED STATES, May 18, 2018 /EINPresswire.com/ -- ITSENCLOSURES, an innovator of durable, NEMA rated enclosures for industrial environments, is proud to announce another heavy-duty, IceStation enclosure: the [PB262426-12](#), a NEMA Type-12 printer enclosure.

The ultra-modern product is designed to shield and protect label barcode printers, on harsh and dirty factory floors, including Zebra thermal transfer barcode printers. The PB26-12 enclosure is fabricated out of 14-gauge painted steel and measures 26" high by 24" wide by 28" deep. The maximum printer dimensions for the PB26-12 are 21" high by 20" wide by 22" deep.

“

The PB26, which is larger than our popular PB20 printer enclosure, provides customers with an alternative option for printer protection in a dirty plant or factory.”

J.T. Spangler

The printer box has lockable front and rear doors for added security and protection from the elements and includes lift and turn compression latches. For customer customization, the front door includes a removable polycarbonate window, which is easily modified for a custom label slot or hinged printer door. The interior of the enclosure features an adjustable 22" extended sliding shelf, which provides easy access to the printer for label media loading. The sliding shelf can be adjusted vertically and will support barcode printers weighing up to 80 pounds. The shelf has an adjustable depth bracket to

keep the printer in position.

The rear of the enclosure features a 10-foot power cord and a mini-split panel built into the door. To route multiple cables and wires, the Roxtec cable entry gland accessory can be added to the enclosure door or sides of the enclosure.

This printer enclosure can also be used for many desktop laser printers by installing an optional 'access hinged printer door' on the top of the unit to retrieve 8½" x 11" sheets of paper.

JT Spangler, Owner and President of ITSENCLOSURES, is thrilled to introduce another printer box

enclosure, “Over the past few years, we have had enormous success with our printer enclosure line. The PB26, which is larger than our popular PB20 printer enclosure, provides customers with an alternative option for printer protection in a dirty plant or factory. We believe that this enclosure will have a significant impact on the thermal barcode printer industry.”

Based on a customer’s printing applications, ITSENCLOSURES are available with NEMA 12 or NEMA 4X ratings. The NEMA 12 IceStation printer boxes protect against dirt, dust, splashing fluids, grease, lint, and damaging fibers in the air. The NEMA 4X enclosure is ideal for wash down applications in the food processing and pharmaceutical industries. Numerous accessories are available for the PB26 printer box enclosure. The most popular accessory is the filtered fan system which creates positive pressure on the inside of the enclosure and prevents dust and dirt entry at the label access slot. A stationary or mobile pedestal is also available at varying heights. A hinged printer door that maintains a seal - until opened – allows an operator to retrieve labels quickly and efficiently. For freezer or cooler environments, a thermostatically controlled heater can be added to maintain temperatures.

“Our goal is to introduce various new products this year and we are happy to offer our customers multiple off-the-shelf solutions, which can ship out in only a couple days,” added Mr. Spangler.

Designing and engineering heavy-duty enclosures since 1985, ITSENCLOSURES manufactures the most durable electronics enclosures on the market and ships every product completely assembled and ready to use upon delivery. Every product is designed and fabricated in Western Pennsylvania.
