David Palmer

Marvelous NFTs uses an in-Dapp currency (BAD DAYS CREDITS) as an easy and familiar way to onboard mass-market (non-[crypto](#)) users to the Dapp.

1 Credit is equal to \$1 (USD).

Credits can be purchased in the same way you would make any in-app purchase- using the credit/debit card you have linked to your payment gateway Via your account.

In the back end, when a user purchases Credits using fiat/dollars, that transaction is actually facilitating the purchase and movement of MNFT tokens.

When the credits are spent, the corresponding MNFT tokens (Reserve Vault) are exchanged for the NFT/ in-game assets and are then permanently removed from the token supply (burnt).

By using a combination of Credits and MNFT tokens, the purchasing Gateways and tokenomic design of the MNFT token ecosystem provides a way for mainstream audiences to interact with digital assets without the complicated issues involved with cryptocurrencies, Wallets and exchanges.

...the dual hybrid ecosystem facilitates interactions from both worlds, catering for a robust Demographic of users.
